

Invoice Processing Control Guide

Cedar Works | FY2026 Q1 | March close | SYNTHETIC TRAINING RECORD - NOT PAYABLE

Purpose

This guide controls intake, matching, exception escalation, approval, and payment release for synthetic vendor invoices used in the March close training set.

1. Intake and capture

Log each invoice on receipt. Confirm vendor code, invoice number, date, due date, PO, cost center, net amount, 10% synthetic consumption tax, gross total, and scan filename. Do not enter bank, tax, QR, or payment-routing data.

2. Three-way match

Match invoice to the synthetic PO and the receiving or service evidence. Record Matched only when quantities, rates, and scope agree. Record Exception for missing evidence, price variance, duplicate candidate, or incorrect coding.

3. Duplicate screen

Compare vendor, invoice number, gross total, and date against the register before approval. Flag duplicate candidates for controller review; do not release a flagged item.

4. Approval and hold

Approved items may move to Released after matching. A Hold requires an owner, reason, next action, and re-review date. The Pine Harbor Facilities invoice remains on Hold because the synthetic HVAC service evidence is pending.

5. Close and cash variance

March cash variance is JPY 12,400,000 unfavorable. Vendor-payment timing explains JPY 3,100,000 of that variance across the broader March AP timing analysis. This invoice batch totals JPY 7,574,600 and is not presented as equal to the timing explanation.

6. Evidence retention

Retain the register, intake batch, scan PDF, match note, approval result, and exception resolution together in the vendor invoice folder. Mark every training document NOT PAYABLE.
