

Customer Alpha Admin Recovery

Restore an administrator after a locked account or lost authenticator while preserving the audit trail.

Audience	Customer Alpha support owners and identity administrators
Prerequisites	Verified Customer Alpha requester and approved administrator roster
Last reviewed	2026-08-04

Procedure

1. Verify the requester against the approved administrator roster using the account record.
2. Open the recovery checklist and record the reason: locked account, device loss, or access-role correction.
3. Require the approved second verification channel before issuing a recovery link.
4. Set a 24-hour recovery window and require a new authenticator enrollment at next sign-in.
5. Add an internal note identifying the approving support owner and close only after sign-in confirmation.

Warnings

Warning: Never accept a recovery request from an unverified email address.

Warning: Never send a one-time recovery link in a public ticket reply.

Escalation boundary

Escalate any roster mismatch, repeated recovery request, or request to change the primary account owner to Identity Operations.

Synthetic example

Example: Customer Alpha admin "Sample Admin A" confirms through the roster channel; recovery is limited to a 24-hour sign-in reset.

Internal operational guidance. Examples, names, IDs, and account details are synthetic.
