

Export Ticket History Guide

Produce a minimally scoped ticket-history export and explain what the administrator receives.

Audience	Support specialists assisting administrators
Prerequisites	Administrator permission and a scoped date range
Last reviewed	2026-08-04

Procedure

1. Confirm that the requester is an authorized administrator and capture the requested date range.
2. Open Admin > Exports > Ticket History and choose the account scope.
3. Select CSV only when structured analysis is needed; otherwise select the readable PDF summary.
4. Review the preview count and exclude internal-only notes unless the request explicitly authorizes them.
5. Start the export, record the job reference internally, and provide the approved delivery channel.

Warnings

Warning: Exports may contain sensitive operational context; use the approved delivery channel only.

Warning: Do not expand scope from one team to the entire account without written authorization.

Escalation boundary

Escalate export jobs stalled beyond 20 minutes, missing expected records, or any request involving legal hold to Data Operations.

Synthetic example

Example: Customer Alpha requests 2026-07-01 through 2026-07-31; the specialist exports the approved account scope and records job EX-SAMPLE-204.

Internal operational guidance. Examples, names, IDs, and account details are synthetic.
