

Unresolved Ticket Triage

Triage the unresolved backlog into a stable, reviewable action plan.

Audience	Support leads and queue managers
Prerequisites	Current unresolved-ticket view and account ownership list
Last reviewed	2026-08-04

Procedure

1. Filter to unresolved status and sort by customer impact, SLA age, and last meaningful activity.
2. For each of the 17 unresolved tickets, confirm status, owner, blocker, and next action.
3. Group related symptoms under the applicable issue ID: KI-1042, KI-1047, KI-1051, or KI-1054.
4. Move waiting-on-customer items to a dated follow-up queue; do not leave them unowned.
5. Review the final list with the Customer Alpha success owner and record exceptions.

Warnings

Warning: Do not close tickets merely because a known issue exists.

Warning: Do not treat a customer acknowledgement as evidence that a workaround succeeded.

Escalation boundary

Escalate any ticket without a next action, any 4-hour SLA risk, or any priority issue with no named accepting team.

Synthetic example

Example: HD-3817 is active investigation; HD-3821 awaits engineering on KI-1051; HD-3830 awaits customer evidence with a dated follow-up.

Internal operational guidance. Examples, names, IDs, and account details are synthetic.
