Closure-control review: 2026 07 20 Desktop Working Slo Calculation Searchable Report Pdf Text

For 2026 07 20 Desktop Working Slo Calculation Searchable Report Pdf Text, evidence docket p02-src-002441 / p02-full-002441 uses p02-full-001872 to assess the Desktop Slo Calculation operational component as a searchable evidence report, keeping its service context separate from the recorded Checkout cause, with a specific lens on critical-path chronology and action ownership. The review method is to treat the component-specific control as a follow-up, not a cause. The evidence is scoped to desktop/working, framed by team.platform-sre, rel.oncall.2026-07-13, date.2026-07-20, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Checkout Operations: confirm that 2026 07 20 Desktop Working Slo Calculation Searchable Report Pdf Text cites the current p02-full-001872 hash before distribution.
2. Platform Reliability Working Group: record the Desktop Slo Calculation review outcome without changing the fixed incident causality; apply the critical-path chronology and action ownership lens and retain the row-specific scope desktop/working in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; treat the component-specific control as a follow-up, not a cause; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
