## Approved incident context

Northstar Transit Cloud | Checkout SVC-17 | incident INC-260713 | 2026-07-13

Checkout availability SLO: 99.95% over 30d; latency SLO: 99.0% below 400 ms. Remaining request-error allowance: error budget 2.4%.

Timeline: deployment 09:18 UTC; Q-07 warning 12,000 at 09:42; S2 09:47; rate limit 09:54; rollback approval 10:02; concurrency 10:11; Q-07 below 8,000/recovery 10:24; impact end 10:31; resolution 10:42 UTC; capacity headroom 31%.

Artifact p02-full-006989 / source p02-src-006989 / scope p02-primary-02. Synthetic training record; no customer data, credentials, secrets, or Kio claims.

## Decision review: 2026 07 20 Postmortem Recurrence Review Searchable Report Pdf Text

For 2026 07 20 Postmortem Recurrence Review Searchable Report Pdf Text, evidence docket p02-src-006989 / p02-full-006989 uses p02-full-000871 to assess the Postmortem Recurrence operational component as a searchable evidence report, keeping its service context separate from the recorded Checkout cause, with a specific lens on change-control ordering and rollback evidence. The review method is to test the declared scope boundary before interpreting a service signal. The evidence is scoped to documents/operations/postmortems, framed by action.act-260713-001, rel.recurrence.2026-q2, date.2026-07-20, and evaluated to treat a threshold crossing as a decision input, not a cause. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

## Assigned actions

1. Checkout Operations: confirm that 2026 07 20 Postmortem Recurrence Review Searchable Report Pdf Text cites the current p02-full-000871 hash before distribution.
2. Incident Review Board and Platform Reliability: record the Postmortem Recurrence review outcome without changing the fixed incident causality; apply the change-control ordering and rollback evidence lens and retain the row-specific scope documents/operations/postmortems in the review record.
3. Platform Reliability: treat a threshold crossing as a decision input, not a cause; test the declared scope boundary before interpreting a service signal; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
