Closure-control review: 2026 07 15 Reliability Runbook Alert Triage Searchable Report Pdf Text

For 2026 07 15 Reliability Runbook Alert Triage Searchable Report Pdf Text, evidence docket p02-src-004989 / p02-full-004989 uses p02-full-001701 to connect Q-07 thresholds and burn-rate signals to the declared S2 decision, with a specific lens on queue-drain proof and recovery-window closure. The review method is to test whether the metric table supports the stated action owner. The evidence is scoped to documents/operations/runbooks, framed by svc.checkout.svc17, rel.inc260713.timeline, date.2026-07-15, and evaluated to record mitigation and recovery as different states. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Observability: confirm that 2026 07 15 Reliability Runbook Alert Triage Searchable Report Pdf Text cites the current p02-full-001701 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Alert Triage review outcome without changing the fixed incident causality; apply the queue-drain proof and recovery-window closure lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: record mitigation and recovery as different states; test whether the metric table supports the stated action owner; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
