Decision review: 2026 Q3 Reliability Runbook Cache Degradation Searchable Report Pdf Text

For 2026 Q3 Reliability Runbook Cache Degradation Searchable Report Pdf Text, evidence docket p02-src-000139 / p02-full-000139 uses p02-full-001216 to assess the Runbook Cache Degradation operational component as a searchable evidence report, keeping its service context separate from the recorded Checkout cause, with a specific lens on load-degradation classification and causal exclusion. The review method is to compare the request-error allowance with the stated operational action. The evidence is scoped to documents/operations/runbooks, framed by svc.identity.svc23, rel.inc260713.timeline, period.2026-q3, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 Q3 Reliability Runbook Cache Degradation Searchable Report Pdf Text cites the current p02-full-001216 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Runbook Cache Degradation review outcome without changing the fixed incident causality; apply the load-degradation classification and causal exclusion lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; compare the request-error allowance with the stated operational action; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
