Evidence reconciliation: 2026 Q3 Reliability Runbook Database Failover Searchable Report Pdf Text

For 2026 Q3 Reliability Runbook Database Failover Searchable Report Pdf Text, evidence docket p02-src-003289 / p02-full-003289 uses p02-full-000385 to evaluate PG-04 failover evidence without introducing a second incident cause, with a specific lens on load-degradation classification and causal exclusion. The review method is to pair the decision timestamp with its accountable reviewer. The evidence is scoped to documents/operations/runbooks, framed by svc.identity.svc23, rel.inc260713.timeline, period.2026-q3, and evaluated to compare the source row before approving a narrative. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 Q3 Reliability Runbook Database Failover Searchable Report Pdf Text cites the current p02-full-000385 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Database Failover review outcome without changing the fixed incident causality; apply the load-degradation classification and causal exclusion lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: compare the source row before approving a narrative; pair the decision timestamp with its accountable reviewer; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
