Evidence reconciliation: 2026 Q3 Terraform Platform Dns Failover Searchable Report Pdf Text

For 2026 Q3 Terraform Platform Dns Failover Searchable Report Pdf Text, evidence docket p02-src-000938 / p02-full-000938 uses p02-full-000228 to assess the Platform Dns Failover operational component as a searchable evidence report, keeping its service context separate from the recorded Checkout cause, with a specific lens on operator decision rationale and approval sequence. The review method is to review threshold evidence before evaluating capacity evidence. The evidence is scoped to infrastructure/terraform, framed by env.prod, rel.change.260713, period.2026-q3, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Checkout Operations: confirm that 2026 Q3 Terraform Platform Dns Failover Searchable Report Pdf Text cites the current p02-full-000228 hash before distribution.
2. Change Control and Platform Reliability: record the Platform Dns Failover review outcome without changing the fixed incident causality; apply the operator decision rationale and approval sequence lens and retain the row-specific scope infrastructure/terraform in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; review threshold evidence before evaluating capacity evidence; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
