## Approved incident context

Northstar Transit Cloud | Checkout SVC-17 | incident INC-260713 | 2026-07-13

Checkout availability SLO: 99.95% over 30d; latency SLO: 99.0% below 400 ms. Remaining request-error allowance: error budget 2.4%.

Timeline: deployment 09:18 UTC; Q-07 warning 12,000 at 09:42; S2 09:47; rate limit 09:54; rollback approval 10:02; concurrency 10:11; Q-07 below 8,000/recovery 10:24; impact end 10:31; resolution 10:42 UTC; capacity headroom 31%.

Artifact p02-full-007565 / source p02-src-007565 / scope p02-primary-07. Synthetic training record; no customer data, credentials, secrets, or Kio claims.

## Decision review: 2026 07 13 Alert Policy Ingress Errors Searchable Report Pdf Text

For 2026 07 13 Alert Policy Ingress Errors Searchable Report Pdf Text, evidence docket p02-src-007565 / p02-full-007565 uses p02-full-000827 to assess the Policy Ingress Errors operational component as a searchable evidence report, keeping its service context separate from the recorded Checkout cause, with a specific lens on operator decision rationale and approval sequence. The review method is to verify each mitigation step has a later recovery observation. The evidence is scoped to observability/alerts, framed by measure.burn-rate-short, rel.slo.2026-q3, date.2026-07-13, and evaluated to keep the impact window distinct from the resolution time. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

### Assigned actions

1. Observability: confirm that 2026 07 13 Alert Policy Ingress Errors Searchable Report Pdf Text cites the current p02-full-000827 hash before distribution.
2. Observability and Checkout SLO Owners: record the Policy Ingress Errors review outcome without changing the fixed incident causality; apply the operator decision rationale and approval sequence lens and retain the row-specific scope observability/alerts in the review record.
3. Platform Reliability: keep the impact window distinct from the resolution time; verify each mitigation step has a later recovery observation; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
