Closure-control review: 2026 07 15 Checkout Oncall Traffic Shift Searchable Report Pdf Text

For 2026 07 15 Checkout Oncall Traffic Shift Searchable Report Pdf Text, evidence docket p02-src-007539 / p02-full-007539 uses p02-full-002183 to verify the authorization rate-limit decision while preserving Identity as available context, with a specific lens on review-readiness and closure criteria. The review method is to confirm the report distinguishes impact end from final resolution. The evidence is scoped to services/checkout/prod/oncall/operations, framed by svc.checkout.svc17, rel.oncall.2026-07-13, date.2026-07-15, and evaluated to treat a threshold crossing as a decision input, not a cause. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Checkout Operations: confirm that 2026 07 15 Checkout Oncall Traffic Shift Searchable Report Pdf Text cites the current p02-full-002183 hash before distribution.
2. Checkout On-Call and Platform Reliability: record the Traffic Shift review outcome without changing the fixed incident causality; apply the review-readiness and closure criteria lens and retain the row-specific scope services/checkout/prod/oncall/operations in the review record.
3. Platform Reliability: treat a threshold crossing as a decision input, not a cause; confirm the report distinguishes impact end from final resolution; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
