Closure-control review: 2026 Q3 Checkout Oncall Traffic Shift Searchable Report Pdf Text

For 2026 Q3 Checkout Oncall Traffic Shift Searchable Report Pdf Text, evidence docket p02-src-003739 / p02-full-003739 uses p02-full-000113 to verify the authorization rate-limit decision while preserving Identity as available context, with a specific lens on queue-drain proof and recovery-window closure. The review method is to treat the component-specific control as a follow-up, not a cause. The evidence is scoped to services/checkout/prod/oncall/operations, framed by inc.inc-260713, rel.oncall.2026-07-13, period.2026-q3, and evaluated to accept only timestamped operational evidence. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Checkout Operations: confirm that 2026 Q3 Checkout Oncall Traffic Shift Searchable Report Pdf Text cites the current p02-full-000113 hash before distribution.
2. Checkout On-Call and Platform Reliability: record the Traffic Shift review outcome without changing the fixed incident causality; apply the queue-drain proof and recovery-window closure lens and retain the row-specific scope services/checkout/prod/oncall/operations in the review record.
3. Platform Reliability: accept only timestamped operational evidence; treat the component-specific control as a follow-up, not a cause; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
