Evidence reconciliation: 2026 07 14 Identity Oncall Directory Sync Searchable Report Pdf Text

For 2026 07 14 Identity Oncall Directory Sync Searchable Report Pdf Text, evidence docket p02-src-005716 / p02-full-005716 uses p02-full-001300 to review directory-sync load context separately from the Checkout queue incident, with a specific lens on SLO interpretation and request-error allowance. The review method is to compare the first warning with the recovery observation. The evidence is scoped to services/identity/prod/oncall/operations, framed by inc.inc-260713, rel.oncall.2026-07-13, date.2026-07-14, and evaluated to separate observed metrics from derived conclusions. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 07 14 Identity Oncall Directory Sync Searchable Report Pdf Text cites the current p02-full-001300 hash before distribution.
2. Identity On-Call and Platform Reliability: retain directory-sync as supporting load context rather than incident initiation; apply the SLO interpretation and request-error allowance lens and retain the row-specific scope services/identity/prod/oncall/operations in the review record.
3. Platform Reliability: separate observed metrics from derived conclusions; compare the first warning with the recovery observation; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
