Decision review: 2026 07 14 Identity Oncall Key Rotation Searchable Report Pdf Text

For 2026 07 14 Identity Oncall Key Rotation Searchable Report Pdf Text, evidence docket p02-src-001338 / p02-full-001338 uses p02-full-001586 to review key-rotation readiness as a controlled follow-up without exposing secret material, with a specific lens on consumer-capacity margin and demand movement. The review method is to separate chronology evidence from control-effectiveness evidence. The evidence is scoped to services/identity/prod/oncall/operations, framed by svc.identity.svc23, rel.oncall.2026-07-13, date.2026-07-14, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 07 14 Identity Oncall Key Rotation Searchable Report Pdf Text cites the current p02-full-001586 hash before distribution.
2. Identity On-Call and Platform Reliability: confirm key-rotation actions remain synthetic and contain no credential material; apply the consumer-capacity margin and demand movement lens and retain the row-specific scope services/identity/prod/oncall/operations in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; separate chronology evidence from control-effectiveness evidence; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
