Decision review: 2026 07 15 Identity Oncall Cache Flush Searchable Report Pdf Text

For 2026 07 15 Identity Oncall Cache Flush Searchable Report Pdf Text, evidence docket p02-src-007614 / p02-full-007614 uses p02-full-001586 to review cache-flush safety as a mitigation detail while preserving the established incident cause, with a specific lens on regional dependency context and containment. The review method is to reconcile source completeness before approving the closure statement. The evidence is scoped to services/identity/prod/oncall/operations, framed by svc.identity.svc23, rel.oncall.2026-07-13, date.2026-07-15, and evaluated to keep the impact window distinct from the resolution time. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 07 15 Identity Oncall Cache Flush Searchable Report Pdf Text cites the current p02-full-001586 hash before distribution.
2. Identity On-Call and Platform Reliability: verify cache-flush controls do not alter the recorded Checkout causal chain; apply the regional dependency context and containment lens and retain the row-specific scope services/identity/prod/oncall/operations in the review record.
3. Platform Reliability: keep the impact window distinct from the resolution time; reconcile source completeness before approving the closure statement; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
