Closure-control review: 2026 Q3 Identity Oncall Audit Log Searchable Report Pdf Text

For 2026 Q3 Identity Oncall Audit Log Searchable Report Pdf Text, evidence docket p02-src-001463 / p02-full-001463 uses p02-full-002901 to validate audit-log completeness against the evidence chain and telemetry reconciliation, with a specific lens on review-readiness and closure criteria. The review method is to cross-check the approved source against the operator handoff. The evidence is scoped to services/identity/prod/oncall/operations, framed by measure.identity.p95-high, rel.oncall.2026-07-13, period.2026-q3, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 Q3 Identity Oncall Audit Log Searchable Report Pdf Text cites the current p02-full-002901 hash before distribution.
2. Identity On-Call and Platform Reliability: reconcile audit-log records with the accepted export evidence; apply the review-readiness and closure criteria lens and retain the row-specific scope services/identity/prod/oncall/operations in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; cross-check the approved source against the operator handoff; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
