Decision review: 2026 Q3 Identity Oncall Session Store Searchable Report Pdf Text

For 2026 Q3 Identity Oncall Session Store Searchable Report Pdf Text, evidence docket p02-src-004265 / p02-full-004265 uses p02-full-001443 to review session persistence pressure and recovery handoff without treating Identity as the initiating cause, with a specific lens on telemetry completeness and evidence-chain reconciliation. The review method is to separate chronology evidence from control-effectiveness evidence. The evidence is scoped to services/identity/prod/oncall/operations, framed by measure.identity.p95-high, rel.oncall.2026-07-13, period.2026-q3, and evaluated to record mitigation and recovery as different states. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 Q3 Identity Oncall Session Store Searchable Report Pdf Text cites the current p02-full-001443 hash before distribution.
2. Identity On-Call and Platform Reliability: confirm session-store continuity notes and preserve the Checkout-originated causal chain; apply the telemetry completeness and evidence-chain reconciliation lens and retain the row-specific scope services/identity/prod/oncall/operations in the review record.
3. Platform Reliability: record mitigation and recovery as different states; separate chronology evidence from control-effectiveness evidence; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
