

Structured interview reference

Reference: OP-INT-2026-08 As of: 2026-08-18

A practical reference for consistent, job-related interviewing for the fictional Requisition Alpha.

Reference context

Requisition Alpha is a fictional People Analytics Partner role with 3 planned openings and a planning band of JPY 7.2-8.4M. The values are planning context only.

Interview purpose	Assess job-related evidence through consistent prompts.
Panel posture	Use neutral follow-ups; record observable evidence rather than impressions.
Decision basis	Compare anchored evidence across the rubric after all interviews.

Recommended flow

Use the same core sequence for each panel conversation; adapt only follow-up depth to the evidence offered.

1. Set context	Explain the structured format and timebox.
2. Explore a scenario	Ask how the person would frame a people-data question.
3. Test partnership	Explore how they align stakeholders on a useful decision.
4. Review delivery	Ask for a method to communicate an actionable insight.
5. Close consistently	Confirm next steps without making commitments.

Anchored evidence guide

Use a simple three-point lens, documented in aggregate for the panel discussion.

Developing	Names a plausible approach but leaves assumptions or stakeholders unspecified.
Effective	Frames a relevant question, identifies trade-offs, and explains a clear next action.
Advanced	Connects rigorous methods, responsible practice, and stakeholder adoption.

This document is a fictional internal reference. It does not contain personal data, employment records, or binding policy language.
