

# Survey methodology note

Orchid People | Synthetic research operations note | As of 2026-08-18

## Purpose

This synthetic engagement pulse models an internal listening cycle for planning and reporting practice. It is not a record of real employee opinions.

## Population and response

| Item                | Definition                        |
|---------------------|-----------------------------------|
| Eligible population | 184 employees                     |
| Invited population  | 146 employees in the survey frame |
| Valid responses     | 118 completed synthetic records   |
| Response rate       | $118 / 146 = 80.8\%$              |
| Field date          | 2026-08-18                        |

## Measures

eNPS is promoters (ratings 9-10) minus detractors (ratings 0-6), reported as +24. Engagement index is the rounded mean of a synthetic 0-100 item score, reported as 76/100. Passive ratings (7-8) are not included in the eNPS numerator.

## Privacy controls

Use only SUR response IDs. Do not collect names, contacts, employee IDs, sensitive demographics, or personal-detail free text. Publish a segment only if its response count is at least 10. Small groups are suppressed rather than combined by inference.

## Limitations

The values are synthetic and illustrative. They support discussion of survey operations, reporting discipline, themes, and actions; they do not support real workforce decisions or individual-level interpretation.
