

Personal Course Design Portfolio

A synthetic instructional-design snapshot - 2026-09-14

This portfolio records a fictional Maple Learning design cycle for Course Alpha 2026 Term 1 and Course Beta 2026 Term 2. Both courses use the same synthetic cohort, ML26-S001 through ML26-S036, formative practice, and a 20-point rubric: E6, R6, O4, F4. No learner identities or grades are represented.

Design commitments

- | | |
|-----------------|--|
| Observe | Gather low-stakes signals from practice before selecting a revision. |
| Practice | Offer a short, accessible task with one visible success criterion. |
| Reflect | Use the same rubric language in feedback, self-checks, and next-step planning. |

Aligned learning sequence

Course Alpha 2026 Term 1

A-101 Evidence Map; A-102 Source Comparison; A-103 Claim-Evidence-Reasoning Brief | E6/R6/O4/F4 = 20

Course Beta 2026 Term 2

B-201 Scenario Map; B-202 Model Test; B-203 Design Critique | E6/R6/O4/F4 = 20

Reflection protocol

For each cycle, the designer checks whether the directions identify a concrete product, whether the practice invites a visible decision, and whether feedback points to one actionable revision. Aggregated cohort observations are used only to improve the next learning experience.
