

Maple Learning: shared lecture cue sidecar

Course Alpha 2026 Term 1 and Course Beta 2026 Term 2 | coordination date 2026-09-14

Purpose

This synthetic cue is a short shared opening signal for instructional-design review. It is not learner work, a grade record, or a communication channel. The same fictional cohort uses canonical learner IDs ML26-S001 through ML26-S036 in both courses; aligned assignment prompts use a rubric total of 20 points.

Audio file specification

Field	Verified value
Exact filename	team-shared-lecture-intro.wav
Container	RIFF/WAVE PCM, signed 16-bit little-endian
Duration	2.500 seconds
Sample rate	48,000 Hz
Channels	1 (mono)
Synthetic content	Three ascending reference tones with two brief silent separators

Precise synthetic tone sequence

0.000-0.600 s: 523.25 Hz sine tone; 0.600-0.700 s: silence; 0.700-1.500 s: 659.25 Hz sine tone; 1.500-1.600 s: silence; 1.600-2.500 s: 783.99 Hz sine tone. Tone level is a smooth 34% full-scale waveform with short fades at each sounding boundary.

Alignment note

The cue supports the shared review of Course Alpha A-101 Evidence Map, A-102 Source Comparison, and A-103 Claim-Evidence-Reasoning Brief; and Course Beta B-201 Scenario Map, B-202 Model Test, and B-203 Design Critique. Every assignment uses the Maple Learning 20-point rubric: evidence E6, reasoning R6, organization O4, and reflection F4. The asset deliberately contains no names, contacts, credentials, or performance data.
