

Instructional Design Retrospective

Maple Learning | Professional development snapshot | 2026-09-14

Context

This retrospective reviews a synthetic learning environment spanning Course Alpha 2026 Term 1 and Course Beta 2026 Term 2. The shared cohort is ML26-S001 through ML26-S036. The design anchor is a consistent 20-point rubric: Evidence E6, Reasoning R6, Organization O4, and Format F4.

What the sequence makes possible

Course Alpha moves from A-101 Evidence Map to A-102 Source Comparison and A-103 Claim-Evidence-Reasoning Brief. Course Beta then asks learners to apply the same habits in B-201 Scenario Map, B-202 Model Test, and B-203 Design Critique. The sequence supports a clear pattern: gather, compare, build, and test.

Design signals to retain

Signal	Practice
Visible expectations	State the product, purpose, and success evidence before work begins.
Useful feedback	Connect one next move to Evidence, Reasoning, Organization, or Format.
Access	Use concise text, headings, and a valid response choice aligned to the goal.
Consistency	Apply E6/R6/O4/F4 across all six assignments.

Next review

At the next Maple Learning design review, examine whether directions, exemplars, and feedback let a synthetic learner see the same success criteria across both courses without changing the 20-point rubric.
