

2026 07 13 Threat Model Access Review Assurance Report Pdf Text

Artifact p03-full-000076 - Searchable assurance report

Assigned review period

2026-07-13

Direct dependency record

p03-full-000265 / p03-src-000265

Dependency source period

2026-07-15

Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: control-boundary; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the operational-boundary exclusion, does the direct foundation record support this decision: verify that the control-boundary source excludes operational system assertions from this dated report? The assessment keeps the source date distinct from assigned period 2026-07-13.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to operational-boundary exclusion. test every conclusion against the classification and control boundary; fail the report if it implies a live account, access event, or production telemetry.

Decision rule

Accept the operational-boundary exclusion conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The source describes only synthetic AC-27 governance evidence. The metrics are review measures and cannot enlarge the scope into operations. The direct record remains p03-src-000265 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The boundary test passes when the report stays confined to evidence handling, approval, retention, and exception disposition. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The boundary reviewer approves the contained wording and flags any later operational inference for removal. The result is retained for assigned period 2026-07-13; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
