

2026 07 13 Threat Model Control Boundary Assurance Report Pdf Text

Artifact p03-full-000037 - Searchable assurance report

Assigned review period

2026-07-13

Direct dependency record

p03-full-000079 / p03-src-000079

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Can the control-boundary review prove that the residual-risk record is used only as governance evidence, rather than as an assertion about a live access environment?

Selection and test method

Start with the synthetic-defensive classification and AC-27 control field, trace the case identifier to its bounded evidence purpose, then challenge the report against a live-system inference: fail the test if any language implies operational access, user activity, or incident compromise.

Scenario-specific workpaper focus

Apply the approval-separation-a-late-attestation-exception-can-be-isolated-triangulation, approval-separation-a-late-attestation-exception-can-be-isolated-counterfactual, approval-separation-a-late-attestation-exception-can-be-isolated-threshold, and approval-separation-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

The direct record names AC-27 and CASE-260713-184 but contains only a synthetic population summary. Its 47 timely and 48 final values are interpreted as control-review measures, not identities, telemetry, or evidence of an operational environment.

Finding

The boundary assessment passes because the source remains a synthetic governance record and its residual Medium rating is confined to evidence assurance. The review does not infer a security event, a live privileged account, or a system condition.

Disposition and follow-up

Approve use of the record for the 2026-07-13 boundary report; at the next review, test the wording of any derivative artifact for accidental migration from control-evidence language into operational or incident language.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
