

2026 07 13 Threat Model Control Boundary Assurance Report Pdf Text

Artifact p03-full-000001 - Searchable assurance report

Assigned review period

2026-07-13

Direct dependency record

p03-full-000079 / p03-src-000079

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Does the residual-risk source provide enough evidence to distinguish a delayed attestation from an unreviewed privileged role without treating final completion as proof of timeliness?

Selection and test method

Select the timely-attestation and final-attestation fields first, calculate the one-record gap, then use the source case and classification fields as a counterexample check: reject the conclusion if it converts a delayed attestation into a missing review.

Scenario-specific workpaper focus

Apply the attestation-lineage-a-late-attestation-exception-can-be-isolated-triangulation, attestation-lineage-a-late-attestation-exception-can-be-isolated-counterfactual, attestation-lineage-a-late-attestation-exception-can-be-isolated-threshold, and attestation-lineage-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

The record shows 47 timely attestations and 48 final attestations for the 48-record population. The one-record difference is interpreted as a bounded timing exception, while the source classification limits this conclusion to synthetic defensive evidence.

Finding

The residual-risk report supports a timing-gap finding, not a population-completeness finding. It preserves RISK-031 as Medium residual risk because compensating completion changes closure status but does not alter the prior timeliness result.

Disposition and follow-up

Retain the timing-gap analysis with the 2026-07-14 source review date; request a future reviewer-completion register check that explicitly reports both timely and final counts before accepting a closure statement.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
