

## 2026 07 13 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000110 - Searchable assurance report

---

### Assigned review period

2026-07-13

### Direct dependency record

p03-full-000195 / p03-src-000195

### Dependency source period

2026-07-15

### Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

### Causal evaluation question

At evidence intake, can the foundation record show that the 47 timely attestations were identified before closure work began?

### Evidence selection and counterexample

Inspect the intake review date, timely-attestation field, case identifier, and risk statement. Counterexample: reject the intake conclusion if it relies on the later final-attestation field to imply earlier timeliness.

### Scenario-specific workpaper focus

Apply the source-date-segregation-a-late-attestation-exception-can-be-isolated-triangulation, source-date-segregation-a-late-attestation-exception-can-be-isolated-counterfactual, source-date-segregation-a-late-attestation-exception-can-be-isolated-threshold, and source-date-segregation-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

### Observation and interpretation

The evidence slice is the 47 timely count at the intake-facing assigned date. It establishes an initial review condition for CASE-260713-184, not a completed remediation outcome.

### Finding

The intake review preserves a one-attestation timing exception that substantiates RISK-031. No closure or retention decision is made from this source slice.

### Decision, owner, and timing

GRC records the intake gap and assigns the next action to the evidence-normalization owner on the source-review sequence; closure language is prohibited until later evidence is separately evaluated.

### Linked source narrative

The linked control registry requires AC-27 quarterly access review, approval, retention, and exception disposition. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

### Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
