

2026 07 13 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000210 - Searchable assurance report

Assigned review period

2026-07-13

Direct dependency record

p03-full-000607 / p03-src-000607

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the compensating-threshold test, does the direct foundation record support this decision: test whether compensating completion meets a closure threshold without concealing the prior delayed attestation? The assessment keeps the source date distinct from assigned period 2026-07-13.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to compensating-threshold test. calculate the difference between timely and final measures, compare it with the stated closure threshold, and reject closure language that calls the difference timely.

Decision rule

Accept the compensating-threshold test conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The threshold is met for final completion, yet one timing exception remains separately observable. This is evidence assurance, not a claim about account activity. The direct record remains p03-src-000607 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The compensating review supports bounded closure evidence but leaves a Medium residual timing concern. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The assurance analyst records the threshold result and assigns the control owner to preserve both measures in the next handoff. The result is retained for assigned period 2026-07-13; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
