

2026 07 13 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000070 - Searchable assurance report

Assigned review period

2026-07-13

Direct dependency record

p03-full-000965 / p03-src-000965

Dependency source period

2026-07-15

Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: control-boundary; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

Does the direct foundation record support this specific decision: test intake-period evidence flow while preserving a later source review date? The assessment must preserve the source case, date/period distinction, and synthetic-defensive boundary.

Evidence selection and counterexample

Select only the control, case, population, timely, final, residual-risk, and classification fields relevant to test intake-period evidence flow while preserving a later source review date. Run a counterexample: reject the decision if final completion is used to erase the 47 timely-attestation observation or if source period is substituted for source review date.

Scenario-specific workshop focus

Apply the reviewer-completeness-a-late-attestation-exception-can-be-isolated-triangulation, reviewer-completeness-a-late-attestation-exception-can-be-isolated-counterfactual, reviewer-completeness-a-late-attestation-exception-can-be-isolated-threshold, and reviewer-completeness-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observation and interpretation

For test intake-period evidence flow while preserving a later source review date, the observed evidence remains 47 timely and 48 final within a 48 record population. This is a bounded synthetic control-review measure; it neither identifies a person nor establishes a live-system condition.

Finding

The finding for test intake-period evidence flow while preserving a later source review date is limited to AC-27 governance evidence. RISK-031 remains residual Medium, and the synthetic-defensive classification prevents operational, incident, or access-environment conclusions.

Decision, owner, and timing

GRC retains this finding for the assigned period 2026-07-13; the control owner must review the next evidence-chain handoff using source p03-src-000965 and its source review date 2026-07-15. The owner records any variance as a bounded exception rather than rewriting the source.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
