

2026 07 14 Threat Model Access Review Assurance Report Pdf Text

Artifact p03-full-000184 - Searchable assurance report

Assigned review period

2026-07-14

Direct dependency record

p03-full-000265 / p03-src-000265

Dependency source period

2026-07-15

Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: control-boundary; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Can the attestation lineage lens demonstrate the compensating review is traceable from the directly linked control-boundary record while keeping source period 2026-07-15 distinct from assigned period 2026-07-14?

Selection and test method

This workpaper selects the reviewer-signoff lineage and compares the initiating attestation against the recorded completion count. It then applies the acceptance condition that the compensating review is traceable; the test rejects any conclusion that conflicts with the source control, case, population, or classification fields.

Scenario-specific workpaper focus

Apply the attestation-lineage-the-compensating-review-is-traceable-triangulation, attestation-lineage-the-compensating-review-is-traceable-counterfactual, attestation-lineage-the-compensating-review-is-traceable-threshold, and attestation-lineage-the-compensating-review-is-traceable-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

Observation: the source supports a compensating review trail, but not a retrospective rewrite of the missed timing event. The source identifies p03-src-000265 for AC-27 and CASE-260713-184; its 47 timely of 48 and 48 final attestations are evidence-chain facts, not workforce or live-system assertions.

Finding

The attestation lineage finding is that the compensating review is traceable is supportable only within its synthetic-defensive boundary. RISK-031 is residual Medium; this does not erase the distinct 47 timely-attestation observation.

Disposition and follow-up

For this attestation lineage workpaper, retain source p03-src-000265 with source date 2026-07-15 and assigned period 2026-07-14; send the attestation-lineage-the-compensating-review-is-traceable-closure outcome to the next evidence-chain review, while routing any variance through the attestation-lineage-the-compensating-review-is-traceable-exception check.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
