

2026 07 14 Threat Model Control Boundary Assurance Report Pdf Text

Artifact p03-full-000217 - Searchable assurance report

Assigned review period

2026-07-14

Direct dependency record

p03-full-000079 / p03-src-000079

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Can the retention alignment lens demonstrate the compensating review is traceable from the directly linked residual-risk record while keeping source period 2026-07-14 distinct from assigned period 2026-07-14?

Selection and test method

This workpaper selects retention-disposition language and tests whether the evidence package remains within the stated retention boundary. It then applies the acceptance condition that the compensating review is traceable; the test rejects any conclusion that conflicts with the source control, case, population, or classification fields.

Scenario-specific workpaper focus

Apply the retention-alignment-the-compensating-review-is-traceable-triangulation, retention-alignment-the-compensating-review-is-traceable-counterfactual, retention-alignment-the-compensating-review-is-traceable-threshold, and retention-alignment-the-compensating-review-is-traceable-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

Observation: the source supports a compensating review trail, but not a retrospective rewrite of the missed timing event. The source identifies p03-src-000079 for AC-27 and CASE-260713-184; its 47 timely of 48 and 48 final attestations are evidence-chain facts, not workforce or live-system assertions.

Finding

The retention alignment finding is that the compensating review is traceable is supportable only within its synthetic-defensive boundary. RISK-031 is residual Medium; this does not erase the distinct 47 timely-attestation observation.

Disposition and follow-up

For this retention alignment workpaper, retain source p03-src-000079 with source date 2026-07-14 and assigned period 2026-07-14; send the retention-alignment-the-compensating-review-is-traceable-closure outcome to the next evidence-chain review, while routing any variance through the retention-alignment-the-compensating-review-is-traceable-exception check.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
