

2026 07 14 Threat Model Control Boundary Assurance Report Pdf Text

Artifact p03-full-000117 - Searchable assurance report

Assigned review period

2026-07-14

Direct dependency record

p03-full-000896 / p03-src-000896

Dependency source period

2026-07-20

Source facts

Source review date: 2026-07-20; source period: 2026-07-20; topic: access-review; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Can the reviewer completeness lens demonstrate a late-attestation exception can be isolated from the directly linked access-review record while keeping source period 2026-07-20 distinct from assigned period 2026-07-14?

Selection and test method

This workpaper selects the completion register and reconciles each review-status category to the 48-record population. It then applies the acceptance condition that a late-attestation exception can be isolated; the test rejects any conclusion that conflicts with the source control, case, population, or classification fields.

Scenario-specific workpaper focus

Apply the reviewer-completeness-a-late-attestation-exception-can-be-isolated-triangulation, reviewer-completeness-a-late-attestation-exception-can-be-isolated-counterfactual, reviewer-completeness-a-late-attestation-exception-can-be-isolated-threshold, and reviewer-completeness-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

Observation: the timely count is 47 while final completion is 48, so the late-attestation condition remains separately visible. The source identifies p03-src-000896 for AC-27 and CASE-260713-184; its 47 timely of 48 and 48 final attestations are evidence-chain facts, not workforce or live-system assertions.

Finding

The reviewer completeness finding is that a late-attestation exception can be isolated is supportable only within its synthetic-defensive boundary. RISK-031 is residual Medium; this does not erase the distinct 47 timely-attestation observation.

Disposition and follow-up

For this reviewer completeness workpaper, retain source p03-src-000896 with source date 2026-07-20 and assigned period 2026-07-14; send the reviewer-completeness-a-late-attestation-exception-can-be-isolated-closure outcome to the next evidence-chain review, while routing any variance through the reviewer-completeness-a-late-attestation-exception-can-be-isolated-exception check.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
