

2026 07 14 Threat Model Residual Risk Assurance Report Pdf Text

Artifact p03-full-000043 - Searchable assurance report

Assigned review period

2026-07-14

Direct dependency record

p03-full-000623 / p03-src-000623

Dependency source period

2026-Q3

Source facts

Source review date: 2026-07-13; source period: 2026-Q3; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the calendar reconciliation, does the direct foundation record support this decision: separate the dated July review event from the Q3 governance calendar before residual exposure is carried forward? The assessment keeps the source date distinct from assigned period 2026-07-14.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to calendar reconciliation. compare the review-event timestamp with the quarterly planning boundary; reject the planning entry if a calendar label substitutes for the dated evidence event.

Decision rule

Accept the calendar reconciliation conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The dated event supplies the review anchor, while Q3 supplies only the planning container. The timing exception remains visible in both views. The direct record remains p03-src-000623 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

Residual exposure can be planned through Q3, but the plan cannot portray the dated review as a quarter-long observation. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The planning coordinator records the calendar reconciliation and asks the risk custodian to recheck the dated anchor at period end. The result is retained for assigned period 2026-07-14; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items. The linked planning-period registry defines 2026-Q3 as 2026-07-01 through 2026-09-30.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
