| Topic / classification | control-boundary / synthetic-defensive |

## Review question

Question. For control-boundary in AC-27, whether the 48-record completion outcome is adequately evidenced during the 2026-07-15 report label while the source row is dated 2026-07-15? The selected analytic protocol is residual-risk calibration.

## Procedure

Procedure. The analyst performs the evidence completeness review by reconcile population, timely attestations, and final attestations against the source row. In this report the method tests whether the incomplete-evidence condition and compensating outcome support residual Medium, explicitly distinguishing inherent severity from the bounded review disposition. Method vocabulary: risk calibration, inherent severity, compensating outcome, residual medium, bounded disposition, severity distinction. The source file is 2026-07-15-threat-model-control-boundary-evidence-metrics-csv-s000265.csv; it is treated as a bounded synthetic source, not a live-system export.

## Source-grounded observation

Observation. Dependency p03-full-000265 / p03-src-000265 states population 48, timely attestations 47, final attestations 48, and residual risk Medium. Under the residual-risk calibration protocol, these values are interpreted only through the listed source fields. Its spine reference is: org.cobalt-harbor: Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. | risk.risk-031: RISK-031 is incomplete quarterly privileged-access review evidence; inherent High and residual Medium after bounded remediation. | date.2026-07-15: Control-owner remediation-plan and retention-disposition validation date.

## Finding and disposition

Finding and disposition. The residual-risk calibration result supports an AC-27 evidence review of control-boundary; it does not establish an incident, an intrusion, or a claim about any real organization. RISK-031 remains residual Medium after bounded remediation. Use the result only for the bounded synthetic review package.

## Accountable action

Accountable action. The GRC reviewer records this residual-risk calibration working paper under CASE-260713-184, preserves the assigned/source period distinction (2026-07-15 versus 2026-07-15), and asks the AC-27 control owner to acknowledge the next review step. Corpus production and QA make no Kio indexing, history, chunk, search-quality, or performance claim.

Prepared for Cobalt Harbor Systems synthetic AC-27 evidence set 184. Record key: p03-full-007576.
