

2026 07 15 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000158 - Searchable assurance report

Assigned review period

2026-07-15

Direct dependency record

p03-full-000195 / p03-src-000195

Dependency source period

2026-07-15

Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

After the review cycle, can the final-attestation field support a closure-evidence flow without hiding the earlier delayed attestation?

Evidence selection and counterexample

Inspect final-attestation completion, source date, classification, and residual-risk field. Counterexample: fail the closure-flow assertion if 48 final attestations is described as 48 timely attestations.

Scenario-specific workpaper focus

Apply the case-link-integrity-a-late-attestation-exception-can-be-isolated-triangulation, case-link-integrity-a-late-attestation-exception-can-be-isolated-counterfactual, case-link-integrity-a-late-attestation-exception-can-be-isolated-threshold, and case-link-integrity-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observation and interpretation

The evidence slice is the final 48-of-48 completion state. It is interpreted as a compensating-review outcome and remains paired with the separately preserved 47 timely observation.

Finding

The final-review flow supports bounded closure evidence while retaining residual Medium risk. It cannot retroactively modify the intake-period timeliness fact.

Decision, owner, and timing

The control owner records the final-review handoff for the assigned period and asks GRC to retain both measures in the next follow-up package, with any divergence escalated as an exception.

Linked source narrative

The linked control registry requires AC-27 quarterly access review, approval, retention, and exception disposition. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
