

2026 07 15 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000090 - Searchable assurance report

Assigned review period

2026-07-15

Direct dependency record

p03-full-000607 / p03-src-000607

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the completion-register handoff, does the direct foundation record support this decision: examine whether the completion register can be handed to the next evidence stage without erasing the timing exception? The assessment keeps the source date distinct from assigned period 2026-07-15.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to completion-register handoff. reconcile the register total to the timely measure and inspect the handoff note for an explicit distinction between completion and timeliness.

Decision rule

Accept the completion-register handoff conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The register supports a final-completion handoff, while the separate timely value preserves the delayed-attestation condition. The direct record remains p03-src-000607 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The handoff is acceptable as closure support, not as a retrospective timeliness certification. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The evidence-flow owner sends the register with both measures and returns ambiguous wording for correction. The result is retained for assigned period 2026-07-15; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
