

2026 07 15 Threat Model Residual Risk Assurance Report Pdf Text

Artifact p03-full-000191 - Searchable assurance report

Assigned review period

2026-07-15

Direct dependency record

p03-full-001052 / p03-src-001052

Dependency source period

2026-07-13

Source facts

Source review date: 2026-07-13; source period: 2026-07-13; topic: access-review; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the intake-to-close chronology, does the direct foundation record support this decision: verify that access-review intake and finalization are represented as separate control moments? The assessment keeps the source date distinct from assigned period 2026-07-15.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to intake-to-close chronology. read the intake opening, closing point, timely measure, and final measure in sequence; fail if finalization is written as though it occurred at intake.

Decision rule

Accept the intake-to-close chronology conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The source chronology preserves an earlier timeliness exception before final completion. That order explains why closure does not rewrite intake evidence. The direct record remains p03-src-001052 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

Finalization demonstrates a compensating outcome, while the intake gap remains a residual governance concern. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The review lead files the chronology with the intake register and schedules a later closure comparison. The result is retained for assigned period 2026-07-15; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
