

2026 07 20 Threat Model Control Boundary Assurance Report Pdf Text

Artifact p03-full-000237 - Searchable assurance report

Assigned review period

2026-07-20

Direct dependency record

p03-full-000896 / p03-src-000896

Dependency source period

2026-07-20

Source facts

Source review date: 2026-07-20; source period: 2026-07-20; topic: access-review; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the seven-day linkage, does the direct foundation record support this decision: confirm that the later follow-up remains traceably connected to the original access-review evidence? The assessment keeps the source date distinct from assigned period 2026-07-20.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to seven-day linkage. match the follow-up context to the case, control, and prior timing measure; reject the linkage if a later closure note lacks the original exception reference.

Decision rule

Accept the seven-day linkage conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The later review can corroborate continuity only because it retains the original timing fact alongside final completion. The direct record remains p03-src-000896 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The follow-up supports a linked governance handoff, but it does not convert closure into evidence of prior timeliness. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The control owner records the linkage result and routes any broken reference to the exception queue. The result is retained for assigned period 2026-07-20; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
