

2026 Q3 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000138 - Searchable assurance report

Assigned review period

2026-Q3

Direct dependency record

p03-full-000607 / p03-src-000607

Dependency source period

2026-07-14

Source facts

Source review date: 2026-07-14; source period: 2026-07-14; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the retention-boundary planning, does the direct foundation record support this decision: decide whether Q3 evidence-flow planning preserves the retention decision as a bounded governance action? The assessment keeps the source date distinct from assigned period 2026-Q3.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to retention-boundary planning. trace the retention rationale to the planning period and reject a plan that substitutes retention language for proof of timely completion.

Decision rule

Accept the retention-boundary planning conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The planning view retains a dated source and a distinct Q3 purpose. Retention explains handling of evidence, not the quality of the original attestation timing. The direct record remains p03-src-000607 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The plan may retain the package for governance review while leaving the delayed-attestation observation intact. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The retention owner documents the Q3 boundary and asks the planner to verify it against the next disposition validation. The result is retained for assigned period 2026-Q3; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked risk registry frames RISK-031 as incomplete privileged-access review evidence, with residual Medium after bounded remediation. The linked date registry identifies 2026-07-14 as normalization, checksum confirmation, and action-owner acknowledgement.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
