

2026 Q3 Threat Model Evidence Flow Assurance Report Pdf Text

Artifact p03-full-000170 - Searchable assurance report

Assigned review period

2026-Q3

Direct dependency record

p03-full-000195 / p03-src-000195

Dependency source period

2026-07-15

Source facts

Source review date: 2026-07-15; source period: 2026-07-15; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Evaluation question

Can the classification handling lens demonstrate a late-attestation exception can be isolated from the directly linked residual-risk record while keeping source period 2026-07-15 distinct from assigned period 2026-Q3?

Selection and test method

This workpaper selects the synthetic-defensive classification and tests that no operational, personal, or live-system inference is introduced. It then applies the acceptance condition that a late-attestation exception can be isolated; the test rejects any conclusion that conflicts with the source control, case, population, or classification fields.

Scenario-specific workpaper focus

Apply the classification-handling-a-late-attestation-exception-can-be-isolated-triangulation, classification-handling-a-late-attestation-exception-can-be-isolated-counterfactual, classification-handling-a-late-attestation-exception-can-be-isolated-threshold, and classification-handling-a-late-attestation-exception-can-be-isolated-corroboration checks. These checks ask different questions: source-field agreement, alternate-outcome sensitivity, acceptance threshold, and corroborating evidence-chain treatment for this exact review scenario.

Observed evidence and interpretation

Observation: the timely count is 47 while final completion is 48, so the late-attestation condition remains separately visible. The source identifies p03-src-000195 for AC-27 and CASE-260713-184; its 47 timely of 48 and 48 final attestations are evidence-chain facts, not workforce or live-system assertions.

Finding

The classification handling finding is that a late-attestation exception can be isolated is supportable only within its synthetic-defensive boundary. RISK-031 is residual Medium; this does not erase the distinct 47 timely-attestation observation.

Disposition and follow-up

For this classification handling workpaper, retain source p03-src-000195 with source date 2026-07-15 and assigned period 2026-Q3; send the classification-handling-a-late-attestation-exception-can-be-isolated-closure outcome to the next evidence-chain review, while routing any variance through the classification-handling-a-late-attestation-exception-can-be-isolated-exception check.

Linked source narrative

The linked control registry requires AC-27 quarterly access review, approval, retention, and exception disposition. The linked date registry identifies 2026-07-15 as remediation-plan and retention-disposition validation.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
