

2026 Q3 Threat Model Residual Risk Assurance Report Pdf Text

Artifact p03-full-000103 - Searchable assurance report

Assigned review period

2026-Q3

Direct dependency record

p03-full-000623 / p03-src-000623

Dependency source period

2026-Q3

Source facts

Source review date: 2026-07-13; source period: 2026-Q3; topic: residual-risk; control: AC-27; case: CASE-260713-184; population: 48; timely attestations: 47; final attestations: 48; residual risk: Medium; classification: synthetic-defensive.'

Causal evaluation question

For the evidence-set sampling, does the direct foundation record support this decision: determine whether the 24-item July evidence set is sufficient to support a quarterly residual-risk statement? The assessment keeps the source date distinct from assigned period 2026-Q3.

Evidence selection, procedure, and failure mode

Select the control, case, review date, population, timely, final, residual, and classification facts relevant to evidence-set sampling. trace the cited evidence-set boundary to the residual rationale, then test an adverse case in which an uncited item is treated as sampled.

Decision rule

Accept the evidence-set sampling conclusion only when the source facts remain internally consistent and the conclusion stays inside the synthetic-defensive AC-27 evidence boundary; otherwise record a bounded variance.

Observation and interpretation

The package identifies a bounded evidence set rather than a complete operational population. Its completion counts describe the review record, not the evidence-set breadth. The direct record remains p03-src-000623 for CASE-260713-184, with 47 timely and 48 final attestations in a 48 record population.

Risk finding

The quarterly statement is supportable only as a bounded evidence-set conclusion; it is not a population-wide certification. RISK-031 therefore remains residual Medium within the synthetic-defensive classification.

Owner, timing, and disposition

The evidence custodian retains the set citation and requires an explicit sampling boundary in the next quarterly package. The result is retained for assigned period 2026-Q3; any variance is handled through the AC-27 exception route rather than by altering the source record.

Linked source narrative

The linked evidence registry identifies evidence set 184 as the bounded July AC-27 package of 24 synthetic items. The linked planning-period registry defines 2026-Q3 as 2026-07-01 through 2026-09-30.

Safety boundary

All material is synthetic defensive GRC evidence. It asserts no Kio indexing, history, chunks, search quality, or performance result.
