

AC-27 Vulnerability Register Vulnerability Register Remediation Assurance Report

Artifact ID	p03-full-006442
Artifact review period	2026-07-13
Direct dependency record period	2026-07-20
Direct dependency	2026-07-20-vulnerability-register-remediation-evidence-metrics-csv-s003278.csv

Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register remediation record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-13; its direct source record is separately dated 2026-07-20. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

Direct dependency facts

Field	Recorded value
artifact id	p03-full-003278
source id	p03-src-003278
ledger path	security/vulnerabilities/foundation/data/2026-07-20-vulnerability-register-remediation-evidence-metrics-csv-s003278.csv
record period	2026-07-20
register topic	vulnerability register remediation
disposition context	remediation records ACT-260713-011 reviewer-completion register validation and follow-up disposition
positive spine refs	org.cobalt-harbor = Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. action.act-260713-011 = ACT-260713-011 publishes the AC-27 reviewer-completion register; completed 2026-07-15. date.2026-07-20 = 2026-07-20 is the seven-day follow-up for closure evidence and residual-risk status.
organization	Cobalt Harbor Systems
control	AC-27
review date	2026-07-13
evidence set	184
case id	CASE-260713-184
risk id	RISK-031
residual rating	Medium
exception id	EXC-260713-006
action id	ACT-260713-011
reviewed records	48
timely attestations	47
final completion rate	100.0%
status	closed_with_follow_up

Assessment question

Assessment question: does the direct-source vulnerability register remediation record support a bounded AC-27 action linkage checkpoint / action linkage checkpoint / action-to-disposition route?

Test method: match action language to the disposition context; then match action language to the disposition context through the action-to-disposition route.

Analytic rationale: An action-linkage review confirms that follow-up language remains tied to the stated disposition. Evidence procedure: Any action reference is retained as evidence-chain context, not as proof of execution beyond the source. This artifact uses the action-to-disposition route to keep its decision bounded. Procedural safeguard: Use an action reference as a trace key and never elevate it to unrecorded execution proof. Evidence slice: compare the direct source topic to the report purpose, then validate the record status against the fact table. Counterexample: a path-oriented label cannot replace the source topic. Decision rule: source-topic wording controls the review subject and status controls its disposition.

Finding: the source identifies vulnerability register remediation and states remediation records ACT-260713-011 reviewer-completion register validation and follow-up disposition. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed_with_follow_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated action linkage checkpoint / action linkage checkpoint / action-to-disposition route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment. Evidence slice: compare the direct source topic to the report purpose, then validate the record status against the fact table. Counterexample: a path-oriented label cannot replace the source topic. Decision rule: source-topic wording controls the review subject and status controls its disposition.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
