

AC-27 Vulnerability Register Vulnerability Register Risk Treatment Assurance Report

Artifact ID	p03-full-000984
Artifact review period	2026-07-13
Direct dependency record period	2026-07-15
Direct dependency	2026-07-15-vulnerability-register-risk-treatment-evidence-metrics-csv-s002396.csv

Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register risk treatment record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-13; its direct source record is separately dated 2026-07-15. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

Direct dependency facts

Field	Recorded value
artifact id	p03-full-002396
source id	p03-src-002396
ledger path	security/vulnerabilities/foundation/data/2026-07-15-vulnerability-register-risk-treatment-evidence-metrics-csv-s002396.csv
record period	2026-07-15
register topic	vulnerability register risk treatment
disposition context	risk treatment records the compensating review that reduces RISK-031 to Medium residual risk
positive spine refs	org.cobalt-harbor = Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. action.act-260713-011 = ACT-260713-011 publishes the AC-27 reviewer-completion register; completed 2026-07-15. date.2026-07-15 = 2026-07-15 is control-owner remediation-plan and retention-disposition validation.
organization	Cobalt Harbor Systems
control	AC-27
review date	2026-07-13
evidence set	184
case id	CASE-260713-184
risk id	RISK-031
residual rating	Medium
exception id	EXC-260713-006
action id	ACT-260713-011
reviewed records	48
timely attestations	47
final completion rate	100.0%
status	closed_with_follow_up

Assessment question

Assessment question: does the direct-source vulnerability register risk treatment record support a bounded AC-27 timeliness checkpoint / denominator checkpoint / count-to-denominator route?

Test method: compare timely and reviewed counts as source observations; then retain the supplied denominator without recalculation through the count-to-denominator route.

Analytic rationale: A timeliness review holds the early-attestation observation apart from later compensating review. Evidence procedure: The completion value is kept with its count context and is not converted into a broader rate claim. This artifact uses the count-to-denominator route to keep its decision bounded. Procedural safeguard: Preserve numerator and denominator together when considering completion or timeliness.

Finding: the source identifies vulnerability register risk treatment and states risk treatment records the compensating review that reduces RISK-031 to Medium residual risk. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed_with_follow_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated timeliness checkpoint / denominator checkpoint / count-to-denominator route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
