## Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register exception age record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-13; its direct source record is separately dated 2026-07-13. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

## Direct dependency facts

| Field                 | Recorded value                                                                                                                                                                                                                                                                                                                        |

## Assessment question

Assessment question: does the direct-source vulnerability register exception age record support a bounded AC-27 provenance checkpoint / provenance checkpoint / table-to-finding route?

Test method: separate assignment timing from source provenance; then separate assignment timing from source provenance through the table-to-finding route.

Analytic rationale: A provenance review treats the source period as evidence context rather than the date of this derivative. Evidence procedure: The direct record name is retained so a reviewer can repeat the check without a search claim. This artifact uses the table-to-finding route to keep its decision bounded. Procedural safeguard: Move from table evidence to a finding through an explicit comparison rather than a summary shortcut. Ordered procedure: inspect the direct topic, then the timely observation, then the final-completion result as separate milestones. Counterexample: a later completion number must not overwrite the earlier observation. Decision rule: retain the milestones in their original evidentiary roles.

Finding: the source identifies vulnerability register exception age and states exception-age records the one-calendar-day EXC-260713-006 compensating-review window and closure status. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed\_with\_follow\_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated provenance checkpoint / provenance checkpoint / table-to-finding route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment. Ordered procedure: inspect the direct topic, then the timely observation, then the final-completion result as separate milestones. Counterexample: a later completion number must not overwrite the earlier observation. Decision rule: retain the milestones in their original evidentiary roles.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
