

AC-27 Vulnerability Register Vulnerability Register Closure Evidence Assurance Report

Artifact ID	p03-full-001064
Artifact review period	2026-07-15
Direct dependency record period	2026-07-15
Direct dependency	2026-07-15-vulnerability-register-closure-evidence-evidence-metrics-tsv-s002955.tsv

Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register closure evidence record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-15; its direct source record is separately dated 2026-07-15. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

Direct dependency facts

Field	Recorded value
artifact id	p03-full-002955
source id	p03-src-002955
ledger path	security/vulnerabilities/foundation/data/2026-07-15-vulnerability-register-closure-evidence-evidence-metrics-tsv-s002955.tsv
record period	2026-07-15
register topic	vulnerability register closure evidence
disposition context	closure evidence records evidence-set 184 reconciliation and the bounded closure disposition
positive spine refs	org.cobalt-harbor = Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. risk.risk-031 = RISK-031 is incomplete quarterly privileged-access review evidence; inherent High and residual Medium after bounded remediation. date.2026-07-15 = 2026-07-15 is control-owner remediation-plan and retention-disposition validation.
organization	Cobalt Harbor Systems
control	AC-27
review date	2026-07-13
evidence set	184
case id	CASE-260713-184
risk id	RISK-031
residual rating	Medium
exception id	EXC-260713-006
action id	ACT-260713-011
reviewed records	48
timely attestations	47
final completion rate	100.0%
status	closed_with_follow_up

Assessment question

Assessment question: does the direct-source vulnerability register closure evidence record support a bounded AC-27 status interpretation checkpoint / lineage checkpoint / source-to-table route?

Test method: treat status as a record value rather than telemetry; then compare each populated source field to the readable register through the source-to-table route.

Analytic rationale: A status review distinguishes a register label from telemetry, alerting, or incident evidence. Evidence procedure: Field values are read in source order before a conclusion is drafted. This artifact uses the source-to-table route to keep its decision bounded. Procedural safeguard: Use the source filename only for traceability; the decision remains grounded in structured fields. Ordered procedure: start with the risk identifier, check the residual-rating field, and finally compare the disposition context. Counterexample: risk language that outruns the rating field is unsupported. Decision rule: the recorded rating limits the assurance conclusion.

Finding: the source identifies vulnerability register closure evidence and states closure evidence records evidence-set 184 reconciliation and the bounded closure disposition. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed_with_follow_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated status interpretation checkpoint / lineage checkpoint / source-to-table route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment. Ordered procedure: start with the risk identifier, check the residual-rating field, and finally compare the disposition context. Counterexample: risk language that outruns the rating field is unsupported. Decision rule: the recorded rating limits the assurance conclusion.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
