

AC-27 Vulnerability Register Vulnerability Register Closure Evidence Assurance Report

Artifact ID	p03-full-001077
Artifact review period	2026-07-20
Direct dependency record period	2026-07-20
Direct dependency	2026-07-20-vulnerability-register-closure-evidence-evidence-metrics-csv-s003107.csv

Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register closure evidence record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-20; its direct source record is separately dated 2026-07-20. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

Direct dependency facts

Field	Recorded value
artifact id	p03-full-003107
source id	p03-src-003107
ledger path	security/vulnerabilities/foundation/data/2026-07-20-vulnerability-register-closure-evidence-evidence-metrics-csv-s003107.csv
record period	2026-07-20
register topic	vulnerability register closure evidence
disposition context	closure evidence records evidence-set 184 reconciliation and the bounded closure disposition
positive spine refs	org.cobalt-harbor = Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. action.act-260713-011 = ACT-260713-011 publishes the AC-27 reviewer-completion register; completed 2026-07-15. date.2026-07-20 = 2026-07-20 is the seven-day follow-up for closure evidence and residual-risk status.
organization	Cobalt Harbor Systems
control	AC-27
review date	2026-07-13
evidence set	184
case id	CASE-260713-184
risk id	RISK-031
residual rating	Medium
exception id	EXC-260713-006
action id	ACT-260713-011
reviewed records	48
timely attestations	47
final completion rate	100.0%
status	closed_with_follow_up

Assessment question

Assessment question: does the direct-source vulnerability register closure evidence record support a bounded AC-27 topic fidelity checkpoint / provenance checkpoint / table-to-finding route?

Test method: use the source topic as the sole subject of record; then separate assignment timing from source provenance through the table-to-finding route.

Analytic rationale: A topic-fidelity review prevents a path label from silently replacing the dependency's register topic. Evidence procedure: The direct record name is retained so a reviewer can repeat the check without a search claim. This artifact uses the table-to-finding route to keep its decision bounded. Procedural safeguard: Move from table evidence to a finding through an explicit comparison rather than a summary shortcut. Ordered procedure: compare the exception identifier with the stated closure context, then inspect the source period without treating it as the artifact period. Counterexample: identical dates are not evidence of identical review purpose. Decision rule: preserve two independently labelled periods throughout the handoff.

Finding: the source identifies vulnerability register closure evidence and states closure evidence records evidence-set 184 reconciliation and the bounded closure disposition. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed_with_follow_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated topic fidelity checkpoint / provenance checkpoint / table-to-finding route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment. Ordered procedure: compare the exception identifier with the stated closure context, then inspect the source period without treating it as the artifact period. Counterexample: identical dates are not evidence of identical review purpose. Decision rule: preserve two independently labelled periods throughout the handoff.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
