

Onboarding flow specification

First-use flow for the Alpha research prototype; optimized for clear consent-free orientation, not data collection.

Handoff anchor

Beacon Field Research / Study Alpha / 2026-07-13 / session UX-184 / n=24

Orient

→ Search

→ Save

→ Project list

Flow and guardrails

Onboarding is optional after the first read. It introduces the study catalog, search controls, and saved-studies behavior. No personal details are requested, stored, or inferred. The user may skip at every step.

Step	Screen content	Action / transition
1. Orient	Beacon mark, one-sentence value proposition	Continue or Skip
2. Search	Illustrated query and filter example	Next or Back
3. Save	Explains bookmark and offline queue	Finish or Back
4. Land	Project List with a brief tip	Tip dismisses after first use

Interaction rules

Progress reads "Step 1 of 3" for assistive technology and is visible as three labeled dots. Skip is a text button with equal tap priority to Continue. Back is unavailable on the first step and returns focus to the preceding step heading.

Condition	Expected behavior
Reduced motion	Crossfade only; no horizontal slide animation.
Interrupted launch	Resume at the last completed step; never replay a completed explanation.
Small viewport	Actions stack vertically with Continue first, then Skip; each target is at least 44 by 44 px.

Success signals

The completion event is only a local prototype state. Session observers note whether participants can name the catalog, search, and saved-study destination after onboarding.
