

Accessibility and interaction notes

Inclusive interaction requirements for research sessions across keyboard, screen reader, touch, and motion preferences.

Landmarks and focus

Each page has one main landmark. Header contains product identity and the saved-studies link; search is labeled before its input. Dialogs trap focus, expose a descriptive title, and return focus to the invoking control on dismissal.

Element	Requirement	Verification
Search field	Visible label; 3:1 adjacent icon contrast; Escape clears suggestions only.	Keyboard + screen reader
Filter drawer	Modal dialog; Apply and Cancel always visible.	Focus loop and restore
Study card	One heading, separate buttons for Save and Open.	Tab order matches visual order

Input and feedback

All target sizes are at least 44 by 44 px. Color is never the only status cue: saved uses icon plus text, and errors use icon, text, and programmatic role. Meet WCAG AA contrast for text and controls.

Context	Requirement
Keyboard	Visible 2 px focus ring with 3:1 contrast; no keyboard trap.
Screen reader	Announce result count and applied-filter changes once.
Touch	No hover-only affordance; swipe is optional and never required.
Motion	Respect reduced motion; transitions complete within 150 ms.

Content language

Use direct, specific labels: "Save study", "Clear filters", and "Try search again". Do not depend on placeholders as labels or use color terms to explain an action.
