

Mobile breakpoint specification

Responsive rules for a narrow research-session viewport; content priority remains stable from 320 px through desktop.

Handoff anchorBeacon Field Research / Study Alpha / 2026-07-13 / session UX-184 / n=24

320 px→ 375 px→ 768 px→ 1024+ px

Breakpoints

The layout is fluid within bands. Mobile is 320-767 px, tablet is 768-1023 px, and desktop is 1024 px and above. No core action is hidden at any width.

Area	Mobile (320-767)	Tablet / desktop
Header	Logo, Saved, compact menu	Full navigation and utilities
Search / filters	Search full width; Filters opens drawer	Search plus inline filter button
Results	One card per row; metadata wraps	Two-column grid at 1024+
Detail actions	Sticky bottom action bar	Inline right-aligned actions

Responsive behavior

At 320 px, the card title may wrap to two lines but never truncates essential labels. Filter chips scroll horizontally with a visible fade cue, yet every chip remains keyboard reachable. The sticky action bar reserves safe-area inset space.

Scenario	Expected response
Text zoom 200%	Single column retained; horizontal page scrolling does not occur.
Landscape phone	Action bar remains visible; drawer uses full-height sheet.
Long translated string	Labels wrap before icon displacement; controls grow vertically.

QA probes

Test 320, 375, 768, 1024, and 1440 px widths; text zoom 200%; reduced motion; keyboard at 768+; and offline save at 375 px.
