

Evidence traceability appendix

Synthetic evidence spine and artifact mapping

Evidence theme	Observed count	Representative synthetic codes
Navigation/status visibility	17 / 24	S03, S04, S14, S22
Trust in confirmations	14 / 24	S01, S13, S17
Error recovery	9 / 24	S06, S17, S21
Accessible wayfinding	8 / 24	S08, S19

EVIDENCE RULE

All participant codes and paraphrases are synthetic. They are used only to preserve a consistent research narrative across files. No names, recordings, faces, voices, contact details, real quotes, or external claims are included.

Artifact mapping

How each finding artifact uses the same bounded evidence

00 Findings readout	Cross-theme synthesis and prototype recommendation
01 Executive findings	Leadership decision framing and scope request
02 Theme deep dive	Navigation/status behavior and implications
03 Task breakdown	Transition-level observation and measurement plan
04 Accessibility findings	Multi-cue wayfinding discussion
05 Segment comparison	Descriptive synthetic experience-band comparison
06 Opportunity prioritization	Directional ordering, not a business case
07 Workshop readout	Discussion prompts grounded in paraphrased behaviors

TRACEABILITY NOTE

The same four themes and counts are repeated deliberately so audiences can compare artifacts without changing the evidence base. Any next-round result should be treated as a separate observation set.
